SKIN LONGEVITY BEYOND ANTI-AGEING

THE CONTINVE PHILOSOPHY

The future of skin health is no longer centred around correction alone. Created for professional clinics and skin-intelligent clients alike, CONTINVE is designed to support the skin's regenerative pathways through science-led formulations, ritual-led experiences and clinically credible performance.

Rather than correcting the signs of ageing, CONTINVE focuses on strengthening skin function over time, helping skin remain resilient, responsive and radiant.

CONTINVE takes a long-view approach to skin health, with a system designed to support stronger, healthier-looking skin over time.

A modern professional approach to long-term skin performance.

A NEW CATEGORY IN DERMOCOSMETICS

Created for aesthetic clinics, medi-spas and advanced facialists, CONTINVE offers a premium professional treatment system with a clear point of difference.

Its formulation combines clinical expertise with elevated textures, helping clinics deliver results in a treatment experience that still feels refined and distinctive – giving clinics a more considered alternative to correction-led treatments alone.

Developed Through Italian Scientific Excellence

Founded in Italy, a globally respected centre of dermocosmetic innovation, CONTINVE is supported by decades of scientific formulation expertise and pharmaceutical-grade manufacturing standards.

Advanced longevity science, intelligent delivery systems and clinically credible actives are combined with refined formulations to create a treatment system that performs as well as it feels.

Designed For The Modern Clinic

More than a standalone facial, CONTINVE is an 8-step professional system that helps clinics build a consistent, premium treatment offer.

By combining professional treatment protocols with integrated at-home treatment support, clinics can deliver clinically backed treatments integrated with moments of self-care, calm and indulgence.

Luxury That Earns Its Place In Your Clinic

As client expectations evolve, clinics are looking for treatments that support visible results while also encouraging healthier skin over time.

CONTINVE answers that shift with a treatment system that combines professional protocols, strong product storytelling and measurable outcomes.

It gives clinics a compelling new way to position skin longevity as a premium treatment category within their service offering.

FIVE BIOLOGICAL PATHWAYS. ONE REGENERATIVE PHILOSOPHY.

While many skincare systems focus on a single mechanism of action, **CONTINVE** combines five complementary biological pathways within one integrated programme.

By supporting regeneration, communication, protection, repair and wellbeing simultaneously, the system delivers a more complete approach to long-term skin performance.

I • SKIN EPIGENETICS

Epigenetics focuses on regulating gene expression rather than altering genetic code. While our genes remain fixed, the way they are expressed changes over time in response to ageing, lifestyle and environmental stressors.

CONTINVE uses advanced biomimetic peptides including Nonapeptide-1 and Tripeptide-32 to support the expression of genes involved in collagen synthesis, repair pathways and cellular renewal, helping skin remain resilient, responsive and healthier-looking over time.

II • EPIDERMAL GROWTH FACTORS (EGF)

EGFs are biomimetic signalling proteins naturally present in young, healthy skin.

As we age, EGF activity declines, slowing cell renewal and repair processes. CONTINVE supports these regenerative pathways to help improve skin density, firmness and overall skin vitality.

III • NEUROCOSMETICS

Through advanced neurocosmetic technology, CONTINVE helps reduce stress-related skin ageing by addressing both visible expression patterns and the skin's sensory wellbeing.

CONTINVE's proprietary Botumimic technology combines advanced neurocosmetic peptides to help soften expression lines while supporting a more relaxed, harmonious appearance.

By supporting relaxation pathways within the skin itself, the treatment helps soften expression tension while creating a unique feeling of comfort and wellbeing.

IV • ADVANCED EXPOSOME PROTECTION

Modern skin is exposed daily to pollution, UV radiation, oxidative stress and blue light. Rather than relying solely on surface protection, CONTINVE helps strengthen the skin's own defence mechanisms through advanced exposome-support ingredients including Sclareolide and Acetyl Tetrapeptide-5, helping improve resilience, radiance and long-term skin health.

Enhancing cellular communication and regenerative signalling to support balanced repair and recovery.

V • GINSENG EXOSOMES

Derived from ginseng stem cells, these extracellular vesicles help enhance cellular communication and regenerative signalling.

Rich in naturally occurring proteins, lipids and RNA, they support collagen production, reduce oxidative stress and help improve skin resilience and recovery.

Together, these pathways form a complete longevity system designed to optimise skin performance over time.

PROFESSIONAL TREATMENT PROGRAMME

The CONTINVE treatment programme is designed as a weekly professional course, supported by homecare to maintain continuity between appointments.

Each step has a clear role within the protocol, creating a treatment journey that feels both purposeful and premium in clinic.

Recommended Treatment Course

- 1 treatment per week for 4 weeks
- 60 minutes per treatment

The Regeneration Ritual

Every step in the protocol contributes to a complete treatment experience, from preparation through to protection.

See 8-step protocol on the next page.

X

RADIANCE PRO CLEANSING MILK

A luxurious preparatory cleanse designed to purify while respecting the skin barrier.

CHRONOPEPTIDE TONING LOTION

Balances, hydrates and prepares the skin for optimal ingredient penetration while supporting circadian regeneration rhythms.

EGF SUGAR EXFOLIATING SCRUB

A controlled resurfacing step designed to encourage renewal without compromising skin integrity.

BOTUMIMIC PRECISION LIFTING SERUM

Advanced neurocosmetic technology helps soften visible expression tension while supporting smoother, firmer skin.

AMETHYST RADIANCE EXOSOME MASK

A regenerative treatment mask powered by ginseng exosome technology to support cellular communication and recovery.

TETRAPEPTIDE PRO EYE & LIP SERUM

Targeted peptide technology designed for delicate, high-movement areas prone to visible ageing.

AGE RESET LONGEVITY CREAM SPF15

Seals hydration, protects skin integrity and supports long-term resilience.

CLEANSE

TONE

EXFOLIATE

LIFT

MASK

TONE

TARGET

FINAL CREAM

**RADIANCE PRO
CLEANSING MILK**

Apply approx. **4ml** using hands to face and neck.

Massage gently, and remove with damp mitts.

**CHRONOPEPTIDE
TONING LOTION**

Apply approx. **4ml** with cotton pads on face and neck.

Pat gently until fully absorbed.

**EGF SUGAR
EXFOLIATING
SCRUB**

Once the skin has dried post toning – apply approx. **6ml** to the face and massage in circular motions, then remove with damp mitts.

**BOTUMIMIC
PRECISION LIFTING
SERUM**

Apply by tracing lines along creases on face and neck, using the precision applicator.

Massage gently focusing on critical areas until absorbed.

**AMETHYST
RADIANCE
EXOSOME MASK**

Apply approx. **8.5ml** to the face and neck, including the eye contour.

Leave on for 15 minutes, then remove with warm, damp mitts.

**CHRONOPEPTIDE
TONING LOTION
(REPEATED)**

Apply approx. **4ml** with hands, massaging gently until absorbed, or with cotton pads.

Pat dry if needed.

**TETRAPEPTIDE PRO
EYE & LIP SERUM**

Apply approx. **0.8ml** to the eye contour and, if necessary, the lip contour.

Massage gently until full absorbed.

**AGE RESET
LONGEVITY CREAM
(SPF15)**

Apply approx. **3ml** to face and neck.

Massage until fully absorbed.

MICROPULSE

THE ESSENTIAL FINAL STEP

MICROPULSE

LIFTING SERUM

A microcurrent-inspired peptide serum designed to support contour definition, firmness and cellular renewal.

MICROPULSE

LIFTING CREAM

A daily longevity cream formulated to support elasticity, comfort and skin resilience.

The take-home range is designed to support the professional treatment programme between appointments. Used consistently at home, the Micropulse products help clients maintain momentum and extend the benefits of in-clinic care.

This creates a smoother connection between treatment room results and everyday skincare at home. Together, they strengthen the overall treatment programme and client journey.

Inspired by the principles of microcurrent biostimulation, Micropulse technology uses an advanced tetrapeptide to mimic the regenerative signals associated with microcurrent treatments, helping support firmness, contour definition and skin vitality without the need for devices.

CLINICALLY MEASURED RESULTS

Clinical evaluation was conducted on 22 women aged 40–65 following a 28-day CONTINVE longevity programme, including:

- 4 professional CONTINVE treatments
- Daily use of Micropulse Lifting Serum
- Daily use of Micropulse Lifting Cream

The condition of the skin was evaluated before the treatment (T0) and after 28 days (T28) using scientific instruments to measure wrinkles, under-eye bag volume, dark circle pigmentation, radiance, elasticity and skin density.

Following one month of combined professional treatment and integrated home treatment support, clinically measured results demonstrated significant improvements:

- –3 years reduction in visible skin age
- +50.8% improvement in skin brightness
- +37.2% increase in dermal density
- –25% visible wrinkle reduction
- –18.5% reduction in under-eye puffiness
- +22.5% improvement in dermal uniformity
- +19.6% improvement in elasticity
- +14.6% improvement in firmness

Beyond visible skin performance outcomes, 95% of participants also reported a sensation of improved physical and mental wellbeing following the programme.

Results were measured using a range of objective scientific instruments including 3D skin analysis, ultrasound imaging and elasticity assessment technology.
